11. CYCLIC GROUPS. If  $G$  is a group and  $a \in G$ , it may happen that every element of  $G$  is a power of  $a$ . In other words,  $G$  may consist of all the powers of  $a$ , and nothing else:  $G = \{a^n : n \in \mathbb{Z}\}$ . In that case,  $G$  is called a cyclic group, and  $a$  is called its generator. We write  $G = \langle a \rangle$ , and say that  $G$  is the cyclic group generated by  $a$ .
