Buzz pollination is a pollination syndrome in which bees use vibrations to extract pollen from flowers, incidentally fertilising them . The buzzing behaviour that some bees display on flowers to extract pollen has also been called 'floral sonication' due to the distinctive sound the vibrations produce.

Ocimum species have a combination of reproductive system which varies with the locality and cultivar. We have studied here the reproductive mechanisms of five variants of three Ocimum species in Nigeria, namely: Ocimum canum Sims., O. basilicum L., and O. americanum L. Flowers from each variant were subjected to open and bagged pollination treatments of hand self-pollination, spontaneous self ...
