Linear Programming Problems Solutions

To find the graphical solution of linear programming problems, we have to follow a few steps. Step 1) Formulate the problem using the objective and the constraints. Step 2) Frame the graph by plotting the constraints lines. Step 3) In this step, determine the valid side of each constraint line.

SOLUTION OF LINEAR PROGRAMMING PROBLEMS. THEOREM 1 If a linear programming problem has a solution, then it must occur at a vertex, or corner point, of the feasible set, S , associated with the problem. Furthermore, if the objective function P is optimized at two adjacent vertices of S , then it is optimized at every point on the line segment joining these two vertices, in which case there are infinitely many solutions to the problem.

In linear programming problems, this region is called the feasible set, and it represents all possible solutions to the problem. Each vertex of the feasible set is known as a corner point. The optimal solution is the point that maximizes or minimizes the objective function, and the optimal value is the maximum or minimum value of the function.

Lesson LINEAR PROGRAMMING PROBLEMS AND SOLUTIONS 1

Linear programming is a quantitative technique for selecting an optimum plan. It is an efficient search procedure for finding the best solution to a problem containing many interactive variables. The desired objective is to maximize some function e.g., contribution margin, or to minimize some function, e.g., costs.

Linear Programming Questions and Answers

The linear programming problem is to find a point on the polyhedron that is on the plane with the highest possible value. Linear programming (LP, also called linear optimization) is a method to achieve the best outcome (such as maximum profit or lowest cost) in a mathematical model whose requirements are represented by linear relationships.
