Symmetric If a b, then b a. If n 2, then 2 n. Transitive If a b and b c, then a c. If y 32 and 32 9, then y 9. Substitution If a b, then can be substituted fora in any expression. Ifx 7, then 2x 2(7). When solving an algebraic equation, justify each step by using a definition, property, or piece of given information.

Algebraic Expressions Practice Test Questions Answers: An algebraic expression is formed from variables and constants using different operations. Expressions are made up of terms. A term is the product of factors. Factors may be numerical as well as algebraic (literal). The coefficient is the numerical factor in a term.
